

Quillon Labs Quarterly Report - Q3 2025

Revenue for the quarter was 4.2 million dollars, up 31 percent year over year. Net revenue retention reached 118 percent, driven by expansion at existing search customers.

Project Halcyon reached general availability on 6 October 2025. By the end of September, 27 enterprise tenants had migrated from Project Atlas to Halcyon, and the Atlas Elasticsearch cluster was shut down.

In August 2025 the company closed a 30 million dollar Series B led by Meridian Capital. The round funds the European expansion and the next generation of Halcyon relevance work.

Headcount and operations

Headcount was 64 at quarter end: 51 employees in the Toronto office and 13 remote employees. Engineering represents 58 percent of headcount.

Risks: the three largest tenants account for 38 percent of revenue. GPU spend exceeded plan because of embedding backfills for migrating tenants.

Priorities for Q4 2025: harden tenant isolation, research a cross-encoder reranker, and sign the first two European customers.
